

HP BUILDER'S KIT

RATED TO: 1200°F
CONTINUOUS

2000°F
INTERMITTENT

HP Builder's Kits feature a heat protective thermal sleeving capable of withstanding 1200°F continuous. This non flammable sleeve has a special weave that allows it to expand and contract over fittings. These sleeves can protect fuel lines, preventing vapor lock. They can also be used to protect wires from heat damage and allow you to hide your wiring. The 1/2" sleeve is ideal for shielding most fuel lines, helping to stop vapor lock and improve performance. The smaller 5/16" sleeve is great for small wire looms and brake lines. The 5/8" id sleeves are ideal for protecting your oil lines from heat damage caused by being too close to the motor or exhaust. So add some heat protection and make your ride a cooler one.

PART NO.	DESCRIPTION
204002	1/2" ID x 2'
204003	5/16" ID x 3'
204008	5/8" ID x 2'
204009	5/8" ID x 6'

APPLICATIONS:

FEATURES:

- Continuous operating temperature of 1100°F, 2000°F intermittent
- Capable of reducing up to 60% of radiant heat
- Special weave that allows it to expand and contract over fittings
- Helps to prevent vapor lock, protects wires from melting, shields oil and brake lines
- Bulk rolls available
- Made in USA
